SECURE VIDEO CONSULTATIONS

Verified Network Inc. is pleased to announce the release of its telehealth platform **drCalls.me**, available **FREE** to healthcare professionals and patients alike. Following the recent increase in demand for secure video conferencing tools, many of which do not meet regulatory guidelines, Verified Network designed **drCalls.me** to incorporate our existing security protocols in a web-based platform for secure, private video conferencing.

drCalls.me was built to enable healthcare workers to communicate with patients and colleagues without the need for an in-office consultation and to maintain the highest standards of security and privacy. Full details of the platform may be found at **drCalls.me**, including:

- PHIPA, PIPEDA and HIPAA compliant
- End-to-end encryption of communication and data storage
- Integrated appointment scheduling
- Record visits against health insurance billing codes
- Record the consult with audio or video
- Take notes during the consult and/or images of the patient or condition
- Export billing reports and data

Information recorded during the call is available for a short period of time for download to office systems.

Alternatively the information recorded may be seamlessly integrated into Verified Medical for long-term storage and communication. Verified Medical was developed over a period of several years, encompassing the latest in security and encryption protocols and is available on a pay-per-use or subscription basis. Verified Medical offers:

- Secure referral and consultation
- Improved patient care and records
- Prioritize patient triage levels and shorten waitlists
- Secure collaboration between healthcare professionals and patient
- Integrated e-fax capabilities
- Secure capture and storage
- PHIPA, PIPEDA and HIPAA Compliant
- Reduce administrative costs
- Secure data capture, transfer and storage in accordance with directives and pronouncements of multiple governing medical bodies
